Abstract (en)

[origin: WO9533123A1] Method and device for detecting and/or measuring at least one geophysical parameter on a core sample (1), particularly in the oil industry, comprising, during a core sampling operation with a core sampler (2), an assembly which is substantially fixed with respect to the sampler (2), a sensor (3) for the detection and/or measurement of said parameter, directly downstream of the outlet (5) of the sampler (2) with respect to the removal direction of the core sample (1), at the vicinity of the removal path of the core sample (1), detecting and/or measuring values of the parameter at least at one location of the core sample (1) while the latter is removed from and/or returned to the core sampler (2), and processing the detected and/or measured values of the parameter for storing them and/or using them immediately.
