Abstract (en)
[origin: EP0710527A2] The grinding wheel (8) is carried in a front tool holder (9) with a triangular wheel base surface for retention of triangular grinding sheets with hook file fastening. The grinding wheel holder is dished and has a triangular base face, or contour, matching the base surface of the grinding wheel. Its outer edge abuts the grinding wheel. Pref. the tool holder is releasably coupled to the drive motor (3) on the side away from the grinding wheel via an eccentric stub (12) and carriers flexible swivel elements (12,18), securing the tool holder against co-rotation and loss on the machine housing (2).
