Abstract (en)

The invention relates to applying a relief to the main surface of a fibreboard (10), such as MDF or HDF boards, by causing a roller (2), provided with low, preferably narrow projections (7), which is heated at its surface up to a temperature of 320 - 420 DEG C, to act on an advancing fibreboard. The results are to a considerable degree aesthetically acceptable and do not cause in any way protruding fine hairs or roughnesses, so that any ensuing painting or colouring treatment can be easily carried out. <IMAGE>
