Abstract (en)
The ceiling plate (1) has a width (B) corresponding to the distance (b) between the parallel supports on which the suspended ceiling is hung. The plate has on the reverse side at least in the area of the four corners upwardly protruding support brackets (7,8) which are slightly set back relative to the longitudinal edge (2,3) of the plate. The support faces (9,10) of the support brackets directed towards the longitudinal edge of the plate are formed with a stepped shape for sitting on the support flanges of the supports. The support faces are set at a distance behind the actual plate surface.

Abstract (de)
Die neue Deckenplatte (1) weist auf ihrer Rückseite mindestens im Bereich der vier Ecken nach oben abstehende und zum jeweiligen Plattenlängsrand (2; 3) hin leicht zurückversetzte Stützlaschen (7; 8) mit gestuften Stützflächen (9; 10) auf. Die Breite der Platte (1) entspricht dem Abstand zwischen zwei parallelen Trägern, auf welchen die Platte (1) abzustützen ist. Die Platte (1) besteht vorzugsweise aus Metall und die Stützlaschen (7; 8) bilden integrierende Bestandteile der Platte (1). <IMAGE>
