Abstract (en)

[origin: EP0711046A1] The storage device is used to store image information, e.g. a code, displayed in a given area of the monitor screen using a photosensitive storage medium (2) attached to the surface of the screen via an adhesive layer. Pref. the photosensitive material is applied to a flat carrier which has a screening layer overlying the photosensitive material on the screen side, so that the photosensitive material only cooperates with the screen in defined relatively spaced regions, corresponding to transparent areas of the screening layer.
