Abstract (en)

[origin: WO9503697A1] A herbicide composition comprising one or more active ingredients, known per se, such as benzofuran, bipyridine, hydroxybenzonitrile, carbamoyl phenyl carbamate, pyridazine, quinoline, sulphonyl urea or triazine herbicide, and one or more activity-promoting agents for improving the efficacy of the active ingredient/ingredients. According to the invention, the herbicide comprises at least one activity-promoting agent which is tetraalkoxylated alkyl diamine with general formula (I) in which R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub> and R<4> are groups which, independent of each other, conform to formula (II), in which one of groups A and B is hydrogen and the other a lower alkyl group, and p+q = 5-150, and n = 1-6, whereby the molecular weight of the compound according to formula (I) is in the range of about 1 000-40 000.
