Abstract (en)
[origin: WO9423622A1] A chemiluminescent coaster, particularly a coaster (10) combined with a luminous filler consisting of a shell (13) containing reagents for inducing chemiluminescence. A single-use chemiluminescent coaster may use light sources in which the reaction takes place extemporaneously at the time of use, as well as light sources wherein the pre-mixed reagents are kept at -40 DEG C in order to prevent any chemiluminescent reaction. Reusable chemiluminescent coasters preferably use extemporaneously chemiluminescent sources which are particularly suitable for such embodiments.
