Abstract (en)

[origin: EP0711613A1] The securing device comprises a frame (15), in which the push wedges (SK1,SK2,SK3,SK4) are displaceably fitted. On the push wedges are arranged the retention nipples (NH1,HN2,HN3,HN4). The push wedges engage in wedge recesses (KA1,KA3,KA4) of a switch rod (16) movably fitted in the frame crossways to the displacement direction of the push wedges, holding under the pressure of a spring (17). The push wedges are connected to a draw bar (18), likewise fitted in the frame and enclosed in a cylinder spring (19) supported against the rear side of the push wedge and the frame. On the frame, over the push wedges is located a slide disc (20) with long slot-shaped recesses (21) for the retention nipples.
