Abstract (en)
[origin: EP0711894A2] The bolt (1) has two connecting rods (5) guided in a bolt housing (2). The ends of the connecting rods are in the form of locking pins (21) which each move out from a guide piece (22). The guide-piece is fixed to a first U-sectioned housing part forming the base (4) of the housing. The guide-piece is fixed by clamping pieces supported on the housing bottom between the base (4") and ridges (19) protruding into the U-shaped intermediate space. Headless screws (40) are screwed into the guide piece and are supported by their ends on the base. Support shoulders (31) extend the entire length of the guide piece and grip under the ridges.
