Abstract (en)

[origin: EP0711895A1] The fastening claw (1) has a neck part (2) which holds the end of the fastening rod and is mounted in a one-piece guide holder (8) fixable to the shutter so as to pivot on the fastening rod's longitudinal axle. The guide holder has a through-hole (16) coaxial with the fastening rod's longitudinal axis and in which the neck part axially fits with a radially compressible end (4). The circular cylindrical sectioned compressible end has at least one longitudinal slot (7) in its outer casing opening out onto its free end (5). The free end has an outer flange (6) gripping behind a thrust edge (18) of the guide holder, when the neck part is inserted into the guide holder.
