Abstract (en)

[origin: WO9533671A2] In the yarn-winding machine proposed, the yarn runs onto the machine at constant speed. The wind-on speed is controlled by passing the yarn over a jockey arm. In addition to the parameter representing the position of the jockey arm, the speed at which the jockey arm changes its position is measured. The two values are superimposed and used to determine an adjustment value for the motor driving the spindle.
