Abstract (en)
[origin: WO9504981A1] Equipment for use in a store at point of sale and/or refund in conjunction with an article of merchandise having associated physically therewith in a manner resistant to accidental or unintentional removal a concealed or displayed electronic read/write tag with a non-volatile memory, the tag being fabricated to respond to a radiofrequency source as an external stimulus permitting the reading or writing facility, where such equipment defines a space into or through which the article can be moved, and possesses (a) a source of radiofrequency signal of strength adequate to provide within the said space a signal capable of being received by the tag to be converted into data and stored in memory and/or capable of stimulating a transmission of data from the tag memory as a radiofrequency signal, (b) a receiver for the stimulated signals corresponding to the stored data and (c) display means to produce point of sale information such as a customer receipt utilising the information in such signals.
