Abstract (en)

[origin: EP0712647A1] The assembly includes a base surmounted by a hollow body (3) and extending rearwardly into a supporting plate (5) for the sole of a shoe. The shoe is retained by two wings (7, 8) articulated around vertical axis (9, 10). Forces applied by the shoe on the wings are transmitted to a spring (12) by a cylindrical longitudinal link (13) with a screw (15) and washer (14). The threshold required to release the lock assembly is adjustable using a floating rocker (25) and collar (24), actuated by an electric motor controlled by a switch placed on the top of the assembly.
