Abstract (en)

An apparatus for wrapping articles (1) with a strip (17) of wrapping material includes conveying means (6), situated along a wrapping line (4) and operated by a motor (9) in phase relation with means (2) for feeding the articles (1). Sensor means (11) detects the presence of articles (1) on the conveying means (6). Second conveying means (12), operated by respective motor means (15), extend through a station (13) where the articles (1) are wrapped with a strip (17) of wrapping material. The second conveying means (12) working speed will be slowed down if there are no articles (1) on the conveying means (6). Means (18) for making joining and cutting lines transversal to the strip are operated in phase relation with movement of the articles (1) along said second conveying means (12). <IMAGE>
