Abstract (en)  
[origin: EP0712790A1] The blister packaging, has a clip section (35, 36) as a cover moving over the cover foil surface (33). The section (35, 36) contains a cover to shroud  $\geq$  one opened recess (32) or two recesses in the packaging. The opened recesses can be adjacent or on facing sides, for  $\geq$  one to be covered by the moving shrouding clip. The cover clip (35, 36) slides along the blister package (30) to reclose a recess (32) where the covering foil has been penetrated or removed, or to cover a recess which remains empty when the packaging is filled with the pharmaceuticals.
