Abstract (en)

[origin: EP0712970A1] The structure is mounted between two vertical support carrying walls and two horizontal slabs (5,6), separated by these walls, demarcating an outwards opening cell (7) which receives a facing panel. Located near the external edge of the slabs are two horizontal rails (14,15), parallel to the plane of the external facade enclosing the cell, fixed on the top of the lower slab and underneath the upper slab. The top rail has a suspension bracket and the bottom rail a guiding and retaining bracket. Top and bottom assembly pieces (18,19) have brackets engaging with those of the rails. The assembly pieces carried by the top and bottom rails engage in a vertical full or hollow section (22), open at its ends. Cotter pins (23,24) engage transversely between each rail and its assembly piece between the rail lower or upper face (25) and the assembly piece upper or lower face (26).
