Abstract (en)  
[origin: WO9505722A1] A radio communication system, more especially for mobile handsets in a microcellular system, wherein a single TDMA transceiver (10) connects to a plurality of separate RDPs (14, 16, 18), one at a time, in different timeslots, so that secondary stations (20, 22) within the coverage area of an RDP can communicate with the shared transceiver during the timeslot allotted to that secondary station.
