Abstract (en)
[origin: EP0713670A2] The suction is generated by a blower (5) housed between two air ducts (7,8) behind grilles (6) in a casing (2) to which the dust collection unit (3) is fitted so that its inlet and outlet face corresponding openings in the top (9) of the blower casing. The collector is positioned between the blower casing and another housing (4) contg. accessories (22). The entire assembly is covered (23) and mounted on a carrying frame (1) which completely covers the unused openings in the underside (10) of the blower casing.
