Abstract (en)

[origin: EP0713775A2] The printing head uses a stack of individual ink jet printing modules (1,4) employing an edge shooter principle, with piezoelectric actuators (11,41) having control electrodes coupled to lead lines (22,32) of a band conductor (2,3). The carrier layer (21,31) of the band conductor enclosing the lead lines is reinforced in the area between the ink jet printing modules and shaped to provide the required spacing between the piezoactuators and the jet rows of the successive modules and for accurate positioning of the latter.
