Abstract (en)

[origin: DE4441652C1] The mounting is used to attach the coin path carrier plate (10) to plate section (12) a main plate of the vending machine via a pair of spaced hinges with a common hinge axis, biased in the direction of the plate section via a spring (42). Each hinge has a hinge pin (22, 40), fitting into a socket (3222, 18) provided by the cooperating hinge element (30, 20). The bias spring acts on the hinge pin (40) of one of the hinges, which has a spherical bearing face and is received by a cylindrical sleeve (38), into which the spring fits at the rear.
