Abstract (en)  
The device comprises a holder (20) for the core on which a coil of wire (15) is to be wound, a spool (21), two levers (11,12) which feed the wire, two tensioning rollers (25,26) which act upon the wire and a clamping and cutting device (24,27). The holder can be driven stepwise about an axle (23). The levers can pivot about their axles (13,18) and can be moved into and out of a wire guide plane. Each lever consists of two mutually pivotable lever segments (11a,11b;12a,12b) with upper and lower clamp jaws (16,17) on the free ends of the lever segments. Each lever can be moved along an axis perpendicular to the vertical wire guide plane (19).

Abstract (de)  
Beschrieben wird eine Wickelvorrichtung (10) zur Herstellung von Ringkernspulen (21). Die Umwicklung erfolgt durch Hebel (11, 12). Damit wird die Umwicklung von Ringkernspulen (21) mit vergleichsweise kleinen Spulenlöchern (29) möglich, womit die Nachteile der Wickelvorrichtungen mit Magazinen vermieden sind. <IMAGE>
