Abstract (en)
[origin: WO9505996A1] A brick type container, particularly adapted for aseptic packaging of liquid foodstuffs, is formed having optimum dimensions and location of a pour spout fitment (70, 80, 90) thereon. The dimensions of the pour spout components are chosen for optimum performance. The top of the container carries a dispensing opening (36) covered by a frangible extrusion coating (48). The fitment is applied to the container by applying it while the container is encased in a pocket on a conveyor, the pocket sides being rigid.
