Abstract (en)

[origin: WO9505511A1] The object of the invention is a log construction comprising a log wall (10) and, located at a distance from it, an additional wall (11) formed of light-weight outer wall logs (12). The light-weight logs are located in the vertical grooves (14) formed at the ends of the logs (13) of adjacent log walls and interlocked by means of connecting pieces (15) with the logs located at the same point, to form an integrated unit or small element. The vertical light-weight corner logs (17) are located in the vertical grooves formed at the ends of the logs of adjacent log walls so that the light-weight corner log is at an angle of 45 DEG to the wall surfaces.
