Abstract (en)
[origin: EP0715023A1] The frame (1) of the machine is a portal with four corner supports (2). Longitudinal frame elements (3) running in the process direction are connected at the top to the corner supports, and transverse elements (4) connect the longitudinal elements or the corner supports. Running gear (5), pref. tracked, is connected to the corner supports, and the frame is movable in the process direction and if necessary in reverse. Running rails (6) are located on the longitudinal elements and are designed for the running of a portal crane (7).
