Abstract (en)

An insulating modular panel (1) featuring quick installation, particularly for house, civil, and industrial building, includes a main body (2) formed by at least one layer of cuttings made of rubber, rubber-cork, and/or foamed clay and/or similar materials, and substantially flat faces (3) and substantially straight peripheral edges (4) for mutual coupling with other adjacent co-planar panels (1') of the same type. The peripheral edges (4) have a connecting means (5) that is suitable to prevent the mutual spacing of the panels (1,1') on their common plane of arrangement. Another aspect of the invention relates to a method for producing panels of the above mentioned type. <IMAGE>
