Abstract (en)
[origin: EP0715072A1] The injector comprises a body (1) with a tip (2) designed to be turned towards an air duct, and at least one calibrated outlet for a fuel jet (J1,J2). It also has a fuel dispersion skirt which receives the fuel jets from the calibrated outlets. The skirt is generally tubular in shape, with an upper end fixed to the body of the injector, and a lower end with at least one outlet. The inner surface of the skirt has divergent (27a,27c) and convergent (27b) surfaces, the convergent surfaces having zones (30) to receive the jets emerging from the calibrated outlets.
