Abstract (en)  
[origin: EP0715419A2] The method involves using a receiver address which is chosen and modified by a user. The address is formed from user-selected information and/or criteria. Detection by the receiver involves comparison for at least partial concordance of the address introduced into the system by the user of the receiver. Only when the information agrees totally with the user-defined criteria is the information recorded. The transmitter can be used to limit information transfer to defined users.
