Abstract (en)

Four identical wall parts (1,2,3,4) are connected together movable by four hinge devices so that, viewed from the end, they form an even sided parallelogram. A web (5) is mounted movable on two opposite wall parts in the middle on the end side and has in its centre a device for guiding a tooling iron. The tooling iron has a striking device (6). The iron and striking device are held centrally by the web and a coil spring between web and striking device resets the iron/striking device unit.

Abstract (de)

Vier scharnierartig beweglich miteinander verbundene Wandteile (1,2,3,4) und eine zentrisch im von den vier Wandteilen gebildeten Parallelogramm angeordnete Körnungs- (9) und Schlagvorrichtung (6) realisieren ein einfach zu handhabendes Werkzeug, um die Stirnenden von Drechselwerkstücken (7) zentrisch zu markieren bzw. zu körnen und so die optimalen Punkte zum Einspannen des Werkstückes in die Drehbank zu ermitteln. <IMAGE>
