Abstract (en)

[origin: EP0715931A1] Four identical wall parts (1,2,3,4) are connected together movable by four hinge devices so that, viewed from the end, they form an even sided parallelogram. A web (5) is mounted movable on two opposite wall parts in the middle on the end side and has in its centre a device for guiding a tooling iron. The tooling iron has a striking device (6). The iron and striking device are held centrally by the web and a coil spring between web and striking device resets the iron/striking device unit.
