Abstract (en)
[origin: EP0716192A2] A transverse force pin sleeve (3) held in the pin bearing (1) is welded with a stable position on a centre axis of a pressure distribution plate (4) which is mounted on a vibration-absorbing or vibration-blocking plastics plate (6) set in a similar position at least in the unstressed state. The plastics plate is positioned centrally on a base of a bearing housing (10). The remaining side spaces between the housing walls (12) are lined at the sides and top with second plastics plates (20) having a lower Shore hardness. The free space round the pin sleeve is filled with a filling material (21).
