Abstract (en)
[origin: EP0716226A2] An inwardly facing ring flange (30) engages the combustion chamber-side faces surface (27) of the valve body, and in it is a central through passage aperture (33) in the area of the axial covering of a plain area of the combustion chamber-side face surface of the valve body surrounding a fuel outlet position. The valve body (1) at its combustion chamber-side end has at least one conical transition to the even face side incorporating the fuel outlet position, with which a conically formed part (31) of the ring flange locates, closing a space between the valve body and the tension nut.
