Abstract (en)  
[origin: EP0716232A1] The compressor unit (3) has a fluid machine (2) with an inlet opening (1) coupled to a suction line (4) and an outlet opening (5) coupled to a fluid separator (6). The fluid separator has a vent line (9) and a return line (11) leading back to the fluid machine, with an after-cooler (7) inserted in the vent line, allowing recovery of condensate, fed back to the working fluid circuit. A further heat exchanger (10) may be inserted in the return line, with an associated fan (12) providing a cooling air stream, acting as a second after-cooler for returning condensate to the working fluid circuit.
