Abstract (en)

[origin: WO9506611A1] In a tube for yarn, especially a twist or spinning tube having a plastic jacket (1; 3; 10) which is entirely or partially conical, care is to be taken to ensure that, during vapour treatment, the condensate forming on the inner surface (8; 11) of the tube is held there and does not drip therefrom. To this end, the inside of the jacket (1; 3; 10) has, at least over a part of its axial length, at least one water-trap section (2; 6; 12), preferably made of porous plastic.
