Abstract (en)

[origin: EP0717159A1] The equipment has a fitting part (1), which is suitable for fastening to a shuttering panel, and a separating strut (9) which can be inserted into a fitting part at each end, in order to form a fixed connection. The direction of insertion (13) forms an angle with the direction of separation (8), which is esp. a right-angle. The strut may have undercuts in the direction of insertion, which engage with corresponding projections on the fitting part, and this may form a positive connection. It may also have insertion shoes (11,12), in order to mate with insertion guides (10) on the fitting part.
