Abstract (en)
[origin: EP0717252A2] The device holds tubes (3a), pref. plastics tubing, such as is used in industrial chemical processes, on a frame (6) inside a housing. The tubes are arranged parallel to, and separated from, one another, in order to form a bundle. At least one band (8) is used to support the tubes, and this is at least a tangent to the tubes of one or more rows. The band runs between supporting bolts (9) on the frame. The tubes in each row may be supported by a band which crosses over between neighbouring tubes, and is fixed between two bolts which lie opposite one another.
