Abstract (en)  
[origin: US5444928A] The ironing board has a rear board part (3) and a front board part (4) pivotably connected by a hinge (5), where the front board part (4) can be folded on top of the rear board part (3) into the resting position or can be folded away from the rear board part (3) into the working position opened out and on the same plane as the rear board part (3). The rear board part (3) is supported in such a way that it is pivotable from the lower resting position into the higher working position by parallel guide rods (8) seated in displacement guide (6) of a slider (7). A guide support (11) is disposed between and connect to the front board part (4) and the displacement guide (6) in a hinged manner and is pivotable with the front board part (4). When the front board part (4) is manually displaced, it forms a forced guidance for the rear board part (3) and its parallel guide rods (8), which, in conjunction with the guide support, support the front board part (4) in the operating or working position of the ironing board.
