Abstract (en)

Device to clamp, release and adjust portions of ski boots (11), which are advantageously, but not only, ski boots for use with snow boards, the device being suitable to clamp, release and adjust the backwards and forwards rotation of the leg portion (12) of the boot in relation to the foot portion (13) on which the leg portion (12) is installed rotatably by means of lateral pivots (32), the device having a first complete clamping position (10b) (Fig.1), a second partial clamping position (10a) (Fig.2) and a third release position (10c) (Fig.3), the second partial clamping position (10a) being associated with an oscillation of the leg portion (12) by a desired determined angle in relation to a median angled position determined as desired by the user. <IMAGE>
