Abstract (en)  
The mountain boot lace eyelet consists of an external metallic casing (11) having a strong mechanical resistance which is fixed on the boot upper. The casing which is folded to form a rectangular section housing (11a) has a leg (11b) with a rivet hole (11c) for fastening to the boot upper. Two semi-circular notches (11e) are provided in the housing rear wall (11) for the passage of the lace. An insert (12) in the shape of a half pulley has a peripheral semi-circular groove (12b). The insert is fixed inside the casing and its groove forms a passage way for the lace. It has a low coefficient of friction and is made of a synthetic material such as teflon for facilitating sliding. The lace eyelet improves the sliding of the lace.

Abstract (fr)  
Ce passant pour lacet de chaussure est constitué d'une armature extérieure (11) présentant des caractéristiques de résistance mécanique et apte à être fixée sur la tige de la chaussure et d'un insert (12) en un matériau à faible coefficient de frottement fixé à l'intérieur de l'enveloppe extérieure (11) et délimitant le chemin de passage (12b) du lacet à l'intérieur du passant. Un tel passant permet de réduire notablement les frottements se produisant entre le lacet et celui-ci. <IMAGE>
