Abstract (en)

[origin: EP0718149A1] The vehicle comprises one or more upper load platforms (16, 18) movable between positions in which they are centred longitudinally above a lower platform (12) for movement of the vehicle and forward and/or retracted positions. These possible movements of the platform prevent a door of a loaded vehicle from interfering with a pillar (14) supporting the platforms (16, 18) and enable the platforms (16, 18) to be linked with the ground or an upper platform (16, 18) of a trailer to be linked with an upper platform of a tractor. <IMAGE>
