Abstract (en)  
[origin: EP0718170A1] The running chassis has 2 parallel longitudinal carriers joined together by at least one transverse carrier and 2 wheel pairs each provided by 2 individual wheels. At least 2 axially opposing wheels are driven by respective motors arranged with their longitudinal axes parallel to the longitudinal carriers. The wheels are supported by drive housings at both ends of the longitudinal carriers, deflected vertically about a pivot axis at right angles to the running chassis longitudinal axis.
