Abstract (en)

[origin: EP0718186A1] The hatchway has a sealing frame-form housing (3) seated upon the opening edge (1a). A manhole (7) open on one side boundary (3d) is formed inside the housing and is closed from the top by inter-engaging covers (2a,2b). The covers are automatically opened by bearing pressure of a body (10) suspended on a crane (5) or closed automatically when the body is withdrawn. On three side boundaries, the frame-form housing has external faces (8) sloping from the inside outwards.
