Abstract (en)
[origin: EP0718210A1] The casing (3) consists of horizontal and vertical round steel bars (6,12) welded together at the intersections. A plastics holder (4) fits into the wire mesh casing which is attached to a steel pallet (2). The steel pallet has a top plate (20), a base frame (22) made of tubular or flat bars(s) and joined together at the corners (7) by steel plate corner elements (26) which have outward pointing support protuberances (27). The steel pallet's sides have support protuberances (28). When several pallet holders are stacked up, the protuberances of each top pallet holder grip over the top round steel bar or top frame of the wire mesh casing of the underneath pallet holder. The base frame of the top pallet holder's steel pallet fits into the underneath wire mesh casing.
