Abstract (en)

[origin: EP0718217A1] A refuse-collecting motor-vehicle (4) is equipped with a body (2) internally divided into two compartments (6, 7) placed upon each other. In a charging hopper (15) formed forwardly of the body (2), provision is made for a first bottom wall (22) on which a first pusher (24) acts, which pusher is adapted to transfer to the first compartment (6) a first type of refuse (6a) emptied out from a rubbish skip (20) which is overturned over the hopper (20) by a gripping and overturning device (18). Extending above the first bottom wall (22) and the first pusher (24) is a second bottom wall (26) adapted to receive a second type of refuse (7a) emptied out from the rubbish skip (20). A second pusher (31) acts on the second bottom wall (26) to push the second refuse (7a) into the second compartment (7) formed in the body (2). <IMAGE>
