Abstract (en)

[origin: EP0718225A2] The loader's marking device is formed by a deflecting component (4) which can be advanced to the trajectory path and moves the printed sheets (2) on an opposite-lying guide strip (7) into a gripping position (10). The deflecting component is formed by a strip (7) which is movable behind the path of revolution of the conveyor drum (1) and which can swivel parallel to its axis. The strip form with the guide component a guide opening (8) to accommodate the printed sheet.
