Abstract (en)  
[origin: EP0718558A2] The combustion chamber is in the form of an annular combustion chamber (1) in which the turbulent flow generator (200) has three free surfaces subject to flow. One surface is the roof surface (210) and the other two are side surfaces (211, 213). The side surfaces are joined to the same wall segment of the feed flow channel (5) and together enclose an acute angle (alpha). The roof surface lies against the same wall segment with an edge (215) running transversely to the flow channel.
