Abstract (en)

[origin: EP0718672A2] A lens (2) is mechanically connected to an image processor (3) having a different mount from that of the lens (2) via a converting adapter (1). A computer (4) is electrically connected to the converting adapter (1) and the lens (2) via electrical terminals (6) and (7). A command transmitted from the computer (4) is converted by an internal converter (8) of the converting adapter (1). The computer (4) controls an internal actuator (2c) of the lens (2) by transmitting a command through communication terminal (7).
