Abstract (en)

[origin: EP0718921A1] The connector comprises a body made of insulating material (14) pierced by two rows of holes (24) which receive the terminals (13). The parallel side walls of the body are cut in order to form stepped retaining pawls (32). The front retaining plate (17) is applied against the front face of the connector body. The front plate is pierced by holes allowing the passage of the terminal parts of the contacts. A locking grid (16) formed of a single piece of the contacts. A locking grid (16) formed of a single piece with two side flanks fitting over the main body.
