Abstract (en)
[origin: WO9508042A1] The invention pertains to a window or French window with a sash having insulating glass and with a frame (1) made of multi-chambered hollow sections, such that between frame (1) and sash (2) there is formed a circumambient space that is sealed off to the inside by a stop seal between frame (1) and sash (2), divided into outer (10a) and inner (10b) circumambient seal chambers by means of a central seal (40) between frame (1) and sash (2) and designed with ventilation apertures (15, 16) for forced ventilation in the frame and sash and with drainage apertures (14c, 14d) in the lower transverse capping of the frame, the frame (1) having a ventilation chamber (11) that adjoins the region of the central seal (40) and is designed with ventilation apertures for the inflow and outflow of air on the way out of the outer seal chamber (10a) into the inner seal chamber (10b).
