Abstract (en)
The lower part (1) of the bottle containing nail polish liquid solvent is oval in shape with an enlargement (2) at its base. This serves to support the bottle in a vertical position. Rising from the lower part is a narrowing truncated surface (3), retaining an oval section, as far as the start of a cylindrical neck (4). The diameter of the neck is larger than the top part of the bottle body (5) and forms a horizontal surface (6) for housing and supporting a disc shaped retention joint (7). At its upper end the neck has a smaller threaded diameter (8) for screwing a plug (9) which contains a sealing joint (11). Inside the neck the retention joint supports a sponge block (12) impregnated with solvent liquid. The sponge has an orifice (13) running from top to bottom into which the finger nail with the nail varnish is introduced. The nail varnish is removed by circular rubbing on the interior walls of the orifice.

Abstract (fr)
Dispositif pour le nettoyage du vernis à ongle permettant le nettoyage du vernis à ongle par simple pression de l'ongle sur les parois intérieures d'un orifice (13) pratiqué dans un bloc spongieux (12) contenu dans la partie haute (4) de la bouteille qui fait office de deux récipients. <IMAGE>
