Abstract (en)

[origin: EP0719592A2] The applicator dispenses a rapid hardening glue under pressure through a narrow nozzle (31). A water feed duct (32) feeds into the glue duct and applies water under pressure prior to parking the applicator. The outside of the jet is then closed by a closing element (30) to prevent loss of water and glue. The water feed is through the support structure (33) of the applicator. The parking station for the applicator has a reservoir to collect water and glue dripping from the nozzle. Prior to re-use the water can be expelled by a fresh feed of glue.
